

Major Selling Points

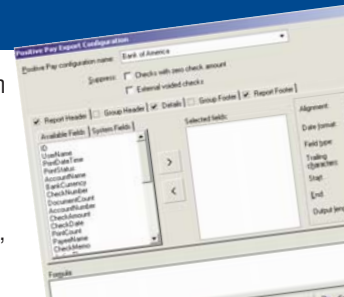

- **Integration** — Software integrates seamlessly with most major accounting and payroll software packages
- **Security Features** — Multi-layered security features help to protect against fraud and theft within your check printing system
- **Controlled Access** — Control access to check printing by check amounts and check types (i.e. accounts payable or payroll)
- **Customization** — Customize check styles and layouts to fit your organizations specific style

TROY Checkwriting Software

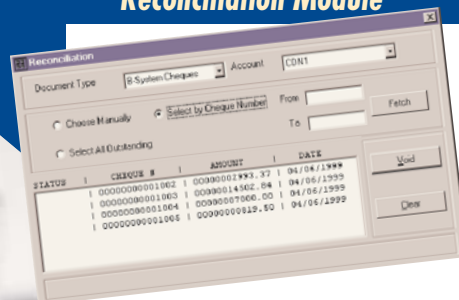

Whether you print ten checks a month or hundreds of checks a day, TROY Checkwriting Software will streamline your payment process. Compatible with most financial software systems, TROY Checkwriting Software merges accounting information with pre-configured electronic check templates and prints checks exactly how you want onto blank security check paper. Simply import data from your existing accounts payable or payroll system and TROY Checkwriting Software does the rest - complete with MICR characters (the numbers found on the bottom of checks), secured amount fonts, and encrypted digital signatures.

Positive Pay Module

The most effective check fraud prevention tool is positive pay, an automated check-matching service that is unparalleled in detecting fraudulent checks. Positive Pay allows you to provide a list of issued checks to your bank through an electronic ASCII text file, enabling the bank to compare drawn checks with issued checks. If a check presented to the bank is not an exact match to the file, your bank will contact you for authorization.

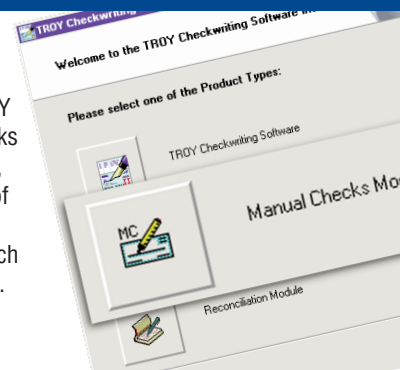

Reconciliation Module

An add-on feature, Reconciliation Module works with TROY Checkwriting Software allowing customers to keep track of outstanding checks by adding void or clear flags to check records either manually or by file import. Also produces reports of outstanding, voided, and cleared payments.

ManualChecks Module

Sometimes it is necessary to create a check for a COD or final pay which does not fit into the week's standard check run. ManualChecks, an add-on designed to work with TROY Checkwriting Software, allows check issuers to create checks or check batches without using a separate accounting, ERP, or payroll system. ManualChecks Module allows creation of manual checks by entering check and voucher details in a data entry screen. Once created, checks are saved to a batch and imported into TROY Checkwriting Software for printing. A record of the checks printed is maintained in the system archive for auditing and tracking purposes.

Complete the Solution

- **TROY[®] MICR Security Printers** - fonts are embedded in the printer, reinforcing security; locking trays help protect against theft of your blank check stock
- **TROY[®] MICR Security Toner** - a patent-pending formula that helps deter fraudulent alteration by releasing a red dye when chemical removal of toner is attempted with a solvent
- **TROY[®] MICR Toner** - in new OEM cartridges this high-quality MICR will not void manufacturer's warranty
- **TROY[®] Check Paper** - with a full selection of stock to choose from, TROY[®] can be your one stop solution for all of your teller printing needs

MODEL SPECIFICATIONS

Corporate Edition

Small Business Edition

Compatibility	Compatible with Windows 98, 2000, XP
Minimum Hardware Requirements	Pentium Processor, 128MB RAM, 200MB free space, CD-ROM Drive, Mouse, USB port
Minimum Software Requirements	Microsoft Windows® 98SE/ME/2000/XP, Microsoft Internet Explorer (Ver. 4.0 or higher)
Installation	Stand Alone, Network
Support	Software Support Contracts Available
Standards	Conforms to ABA, CPA, APACS, ANSI Standards

TROY Feature

Check Signing Controls	Corporate Edition	Small Business Edition
Print Authorization - option prompts user to swipe magnetic signature card to enable printing	✓	✓
Signature Groups - magnetic signature card allows signing officers to swipe for print authorization	✓	✓
