

## ➤ Adding Security to your check printing process

### **Protect corporate live checks by preventing unauthorized access to printing them.**

To protect negotiable and private documents - like checks Capella Technologies offers various levels of Security, from Audit, Encryption, Smart Card to a physical Key lock added to your printer.

The Key lock option provides extra security through a hardware locking key that allows printing only when enabled.

Using digital signatures on documents is a great advantage, it increases business efficiency by reducing document processing time. With Capella Technologies, Key lock option and DIMM, access to signatures used to create negotiable documents can be controlled.

The Capella Technologies DIMM snaps into the memory upgrade slot of your HP laserJet printer. The Key lock is accessed through the back of the printer.
